

Poultry Aid Plus®

Poultry Aid Plus is a registered product of Agrarian Marketing Corporation, DBA Agrarian Solutions.
Updated: August 2017

REDUCE EARLY MORTALITY AND EARN!

Poultry Aid Plus® can make a significant difference in reducing early poultry mortality by dealing with gram negative organisms both enzymatically and with gut acidification.

Some products may bind important minerals and generally have a high inclusion rate in the diet. Poor quality feeds continue attacking poultry and their internal organs. Ultimately the damage is still happening and will take its toll on health, production, reproductive and immune system failure. Increasing the nutritional plane is a solution that will only mask the real problem and can be quite expensive.

Poultry Aid Plus® is a unique direct-fed microbial product that is more effective than other direct fed microbials because of the presence of L-form bacteria. Poultry Aid Plus® is designed specifically for environmental feed challenges caused by molds and their metabolites. Common signs of these problems are: reduced growth, poor feed conversion, increased mortality/morbidity, poor vaccine response, bruising, increased processing condemnations, oral lesions, decreased egg production, and lower egg shell quality. Poultry Aid Plus® enhances the immune system to assist poultry when faced with these challenges.

RESEARCH University of Wisconsin

USE DIRECTIONS Shake well before using: Add 0.5 ml/liter of drinking water. Use per feeding instruction.

PACKAGING 1 Gallon Container (#6945)
1 Liter Container (#6945)

STABILITY Stable for two years. Store in cool, dry place.

INGREDIENTS Purified Water, Propylene Glycol, Citric Acid, Phosphoric Acid, Malic Acid, Tartaric Acid, Riboflavin, Glucose, Pyridoxine Hydrochloride, Thiamine.

GUARANTEED ANALYSIS	Thiamine.....	668 mg/lb.....	(34 mg/fl oz.)
	Riboflavin.....	615.6 mg/lb...	(43 mg/fl oz.)
	Vitamin B6.....	532.2 mg/lb....	(47 mg/fl oz.)
